

Call for Papers

AI4Teach@PoliTO 2027

PoliTO Community Workshop on Generative AI in University Teaching

April 2027 - Politecnico di Torino,

Generative artificial intelligence is rapidly transforming university teaching and learning. Students and instructors are experimenting with new tools for content generation, tutoring, feedback, assessment, and course design. At the same time, universities are facing important questions concerning reliability, academic integrity, privacy, inclusion, sustainability, and the development of critical skills.

AI4Teach@PoliTO aims to bring together the Politecnico di Torino community to share teaching experiences, methodologies, and open questions regarding the use of generative AI in higher education.

The workshop welcomes both systematic research and experience-based contributions. We particularly encourage critical evaluations of the opportunities and limitations of generative AI, including unsuccessful experiments and lessons learned.

Topics of interest

Topics include, but are not limited to:

- Generative AI for course and learning material design;
- AI-supported tutoring, feedback, and student assistance;
- Uses of generative AI by students;
- Assessment redesign and academic integrity;
- Training and support for university instructors;
- Empirical evaluation of AI-supported teaching practices;
- Discipline-specific applications in engineering, architecture, and design;
- Personalization, accessibility, and inclusion;
- Bias, fairness, and responsible AI;
- Privacy, intellectual property, and data protection;
- Environmental and social sustainability;
- Effects on student autonomy, creativity, and learning;
- Institutional policies and governance;
- Technical tools and integration with learning platforms;
- Limitations, failures, and unintended consequences.

Who can submit

The call is open to all members of the Politecnico di Torino community, including faculty members, researchers, postdoctoral researchers, PhD candidates, teaching assistants,

technical-administrative staff, and students. Interdisciplinary contributions and collaborations involving different departmental backgrounds are especially welcome.

Submission guidelines

Submissions follow a two-stage process. Both the abstract registration and the full paper must be submitted through Microsoft CMT. Submission platform: [CMT LINK]

Stage 1 - Abstract registration

Authors must register an abstract in English by the abstract deadline. The abstract should be 300-500 words and provide enough information for the organizers to understand the proposed contribution and identify suitable reviewers. It must include:

- The title, author names, affiliations, and contact details;
- One to five keywords;
- The educational context or problem and the objectives or questions addressed;
- The proposed or implemented approach;
- The expected or available findings, evidence, or lessons learned;
- The relevance of the contribution to the workshop.

No separate abstract file is required: the abstract must be entered directly in CMT. Abstracts will be used for planning and reviewer assignment, not for a separate acceptance decision. Only contributions registered by the abstract deadline may proceed to full-paper submission. Authors may update the submission metadata until the full-paper deadline.

Stage 2 - Full-paper submission

Registered authors must upload an original full paper in English as a PDF file by the full-paper deadline. Papers must be 8-12 pages long, including references and appendices, and follow the workshop's single-column template.

The template will be available at:

<https://www.overleaf.com/latex/templates/springer-lecture-notes-in-computer-science/kzwwpvhwnvfj>

The workshop uses the Springer LNCS single-column format for layout purposes only. The proceedings will be published independently by Politecnico di Torino and are not affiliated with Springer Nature.

Full papers may present research studies, empirical evaluations, teaching experiences, case studies, methods, tools, educational resources, position papers, or institutional initiatives. Papers should clearly describe their context, objectives, approach, and main findings or lessons learned.

Submissions must present original work that has not already been formally published and is not simultaneously under review elsewhere. A previous presentation in a non-archival

seminar or workshop does not preclude submission, but it should be disclosed to the organizers.

Review process

Full papers will undergo a **single-blind peer-review process**. The reviewers will know the authors' identities, while the reviewers' identities will not be disclosed to the authors.

Each submission will be evaluated by at least two reviewers according to:

- Relevance to the workshop;
- Clarity and quality of presentation;
- Soundness of the methodology or experience analysis;
- Originality or practical significance;
- Quality of the evidence and discussion;
- Potential usefulness for the university community.

Authors should include their names, affiliations, and contact information in the submitted paper. Conflicts of interest will be handled by the Workshop Chairs. Committee members who are authors of a submission will not participate in its review, discussion, or acceptance decision.

Presentation format

Accepted papers will be presented during the workshop as either oral presentations or posters. The presentation format will be determined by the organizers based on the characteristics of the contribution and the overall program.

Oral and poster papers will be considered equally accepted contributions and will be included in the proceedings under the same publication conditions.

At least one author of each accepted paper must attend the workshop and present the contribution.

Proceedings

Accepted papers will be published in an open-access proceedings volume with an ISBN assigned in collaboration with the Politecnico di Torino Library System.

Publication will be conditional on the submission of the final camera-ready version and the required publication agreement. The proceedings license and detailed camera-ready instructions will be communicated to the authors before final submission.

The workshop is intended as a recurring initiative, with a separate proceedings volume associated with each annual edition.

Important dates

- Paper abstract deadline: 15 December 2026
- Paper submission deadline: 15 January 2027
- Notification of acceptance: 30 January 2027
- Camera-ready submission: 15 February 2027
- Workshop: April 2027 (Exact date, time, and venue to be announced)

All deadlines are at 23:59 Anywhere on Earth (AoE).

Scientific Committee and Workshop Chairs

- Claudio Savelli, Politecnico di Torino
- Paolo Manfredi, Politecnico di Torino
- Riccardo Coppola, Politecnico di Torino
- Giacomo Garaccione, Politecnico di Torino
- Maria Castro, Politecnico di Torino
- Mariagrazia Graziano, Politecnico di Torino
- Flavio Giobergia, Politecnico di Torino
